ABSTRACT

This annotated bibliography, revised from "A Basic Geographical Library", presents a list of books selected as a core for the geography collection of an American undergraduate college library. Entries numbering 1,760 are limited to published books and serials; individual articles, maps, and pamphlets have been omitted. Books of recent date in English are favored, although older books and books in foreign languages have been included where their subject or quality seemed needed. Contents of the bibliography are arranged into four principal parts: 1) General Aids and Sources; 2) History, Philosophy, and Methods; 3) Works Grouped by Topic; and, 4) Works Grouped by Region. Each part is subdivided into sections in this general order: Bibliographies, Serials, Atlases, General, Special Subjects, and Regions. Books are arranged alphabetically by author with some cross-listings given; items for the introductory level are designated. In the introduction, information on entry format and abbreviations is given; an index is appended. (Author/JSB)

INTRODUCTION

This bibliography presents a list of books selected as a core for the geography collection of an American undergraduate college library. In revising A Basic Geographical Library we have added new books from the gratifyingly large volume of relevant publications during the last four years, removed some older material, and moderately expanded the number of items.

The length of the list must be arbitrary, since an exhaustive list is not within present intention or possibility. The pressures felt by the editors are mostly for a longer list. The longer the list, however, the less information is implied about the desirability of any particular book. Only the users of the list can report on the advantages of a longer or shorter bibliography.

Essentially the bibliography is limited to published books and serials—the staples of library acquisition. Individual articles and maps are not included. Pamphlets of various descriptions have been omitted, though admittedly it is not always possible to distinguish a pamphlet from a book. In keeping with the purpose of the bibliography, books of recent date in English have been favored, though many books in foreign languages and older books, even though not currently available, have been included where their subject or quality seemed needed. Current American editions have usually been cited when possible. Some coverage has been provided for fields peripheral to geography; the purpose is to include a selection of books needed for supporting geography rather than to develop those fields for themselves. Highly specialized books have been avoided.

This revision is the product of the work of a large number of people, just as was the 1966 edition. Their help is gratefully acknowledged. Without it the revision could not have been made. Requests for suggested changes were sent to more than 400 geographers chosen from the various fields; many responded with carefully considered lists that must have taken hours of work. The tentative list for each section was submitted to a consultant (some 30 in all) whose recommendations were carefully weighed in making final selections. The pledge of anonymity to all these people precludes any identification.

The form of this edition and the greater part of its substance represent the work of Martha Church, Robert Huke, and Wilbur Zelinsky, the panel in charge of the original edition. The more we worked on its remodeling, the more impressed we were with the structure of the house they fashioned.

To our respective departments at San Fernando Valley State College, The University of Oregon, and Michigan State University, and to our colleagues we owe many thanks for facilities, generous help and suggestions, and patience. Assistance in bibliographic research, compiling, sorting, and typing was provided principally by Barbara Bailey, LeRoy Barnett, Addie Binstock, Emily Dicken, Nancy Forbes, Ronald Garst, Janet Lawson, Lydia Lewthwaite, Ellen Rosenburg, and Marjorie Winters. Because of their keen help and good spirits, the impossible took only a little longer.

Organization of the Entries

Outline

The contents of the bibliography are arranged into four principal parts: I. General Aids and Sources; II. History, Philosophy, and Methods; III. Works Grouped by

Topic; and IV. Works Grouped by Region. Each part is subdivided into sections concerned with specific topics or regions. The sections are broken down into subsections as appropriate, in this general order: Bibliographies; Serials; Atlases; General; Special Subjects; Regions. Within each subsection books are arranged alphabetically by author.

Cross-Listing

Many books logically belong in more than one section, especially in the respective sections of Parts III and IV. Each book is cited in a primary location. In any other sections it is identified by the section of its primary location and its serial identification number. The cross-listing is designed only to supplement the Table of Contents as a means of locating other books on a given subject. E.g., few items under Soils are cross-listed under Agriculture because nearly everything would apply; items in Part I are seldom cross-listed because many are so general as to relate to a large number of other sections. The idea of cross-listing approximates at least one suggested definition of geography. It could be carried on ad infinitum, but the attempt has been to apply it where it can be useful.

Anatomy of the Entry

The entries are identified sequentially by numbers placed in the right-hand margin. Underlined numbers refer to selections for two-year college libraries. (See paragraph by James R. Anderson on page v.)

The contents are arranged in this order insofar as the information is obtainable or applicable:

1. Author(s), editor(s), compiler(s), or organization(s). The principal exception to this order occurs in the case of periodicals, which are usually identified by title.
2. Title; subtitle.
3. Translator and indication of original language.
4. Series.
5. Edition, when a second or later edition is cited.
6. Place of publication.
7. Publisher.
8. Date of publication.
9. Number of pages (normally the number identified with Arabic numerals in the book).
10. Number of volumes, if more than one.
11. Price (given when available for books in print; in some other cases, old prices have been given as a guide to the outlay that may be necessary).
12. Library of Congress or other catalog number.
13. Other important publication details.
14. Citation of paperback edition or reissue.
15. Brief note on content, usefulness, or quality.

The items in this bibliography, which are marked by underlining of the item number, have been so designated by the panel of the Commission on College Geography studying the role of geography in the two-year colleges. This designation of items has been made for the purpose of providing a useful guide to geography instructors and librarians in the two-year colleges for the purchase of books and serials most likely to be used in conjunction with the teaching of introductory-level courses.

1. GEOGRAPHICAL BIBLIOGRAPHIES

AMERICAN GEOGRAPHICAL SOCIETY. Current Geographical Publications; Additions to the Research Catalogue of the American Geographical Society. Ed. by Nordis Felland. New York: AGS, 1938-. Mimeo. Monthly except July and August. 1

A comprehensive listing, by subject or region, of recent books and periodical articles with occasional descriptive annotations. Yearly indices.

AMERICAN GEOGRAPHICAL SOCIETY. Research Catalogue of the American Geographical Society. Boston: G. K. Hall, 1962. 15 v. 10,453 pp. Map Supplement in Vol. 16. \$950.00. LC 63-4923. 2

Photocopies of the cards in the AGS Research Catalogue, 1923 through 1961. Most of the cards are arranged primarily by means of a detailed regional system; then, within a particular area, cards are further classified by topic. An invaluable research aid.

Although this work is not specifically geographic in coverage, concentrating instead on history, the humanities, and social sciences in general, it is a most useful guide to collateral readings for geographers on the specified areas. Brief descriptive and critical annotations.

ASSOCIATION DE GÉOGRAPHE FRANÇAIS. Bibliographie Géographique Internationale. Paris: A. Colin, 1891-1953; Centre National de la Recherche Scientifique, 1954-. Annual. (Vol. 72 covered 1966). LC 25-1167. 4

This "most convenient, comprehensive, and in many respects the best of all current geographic bibliographies" normally appears annually, with the collaboration of an international group of contributors. It lists books and periodical articles that were published during the specified year. Brief signed commentaries are appended to many entries. The book is divided into various regional and topical sections, with the former dominating.
